Araucarias in my nurseries

Araucaria plumosa

After long years experiance, I am able to offer this fine and new variety as a reully perfect Auraucaria, which unites the qualities of A excelsa and A. compacta robusta.

In habit similar to A excelsa it distinguishs itself though his compact and vigorous growth, which prevents the branches to hang down, one of the principal faults of A excelsa. While A excelsa must be cultivated for 5 to 6 weeks after travelling, A. plumosa has after 2 to 3 days his ordinary appearence and is directly salable.

His growth is very regular and every tier produces a nice crown of 4 to 5 branches. Indeed there is no loss in cultivation and in my large cultures are not 1/2 % irregulary grown plants.

To this most important avantages it adds a beautifull bright, fresh green color, quite different of all other varieties in cultivation and which makes it so much liked by the public.

Decidedly Araucaria plumosa will be the Araucaria of the future.

I have made this variety one of my specialities and I can offer this year 20 to 25000 salable plants

Azalea Mollis

Azalea Mollis is a native of Japan, one of our most beautiful shrubs for forcing or planting in groups. The flowers are larger and of more perfect form than those of the A. Pontica, and resemble in form and size those of the Indian Azaleas. Their gorgeous colors vary from yellowich white, rose, all shades of yellow to the richest orange.
